

PSD60-1AF & PSD60-2R FAQ

Q. What are major differences between PSD60-1AF and PSD60-2R?

A. The front panel connections are the same and can be substituted for most standard measurements.

The PSD60-1AF is primarily intended for military applications. It has a long service history with the Air Force and has is written into many Military TOs. It has the standard capabilities of AC Capacitance measurement and Megohm resistance.

The PSD60-2R is primarily intended for commercial aircraft. It is also newer technology and the measurement ranges are broader with better resolution. It also has DTF (Distance To Fault) modes and variable drive frequency for troubleshooting aircraft wiring and special test applications.
